

IQ VETERINARY ONE STOP SOLUTION

OVERVIEW

Ailments in the rearing of young farm animals, such as gastro-enteritis or diarrhoea, are known as scours. Bacteria and viruses are the common causative agents to these conditions, resulting in these animals having a net loss of water and electrolyte imbalance via the gut. When scours are left untreated dehydration, acidosis, toxæmia and loss of essential electrolytes arises which can eventually lead to the death of these animals. **IQ Veterinary One Stop** solution has been developed to treat cases of scours in these affected animals through oral administration.

FEATURES

- **IQ Veterinary One Stop** consists of an isotonic electrolyte solution with mixed oxidants to effectively kill pathogens that inhabit the oral cavity, oesophagus, stomach and upper parts of the small intestine.
- **IQ Veterinary One Stop** inactivates bacterial toxins which is a major advantage compared to ordinary electrolyte solutions which do not have such capabilities.
- The active ingredient responsible for its high affinity to eliminate germs is HOCl which is a powerful, yet friendly non-toxic biocide.
- Treatment of scours with the dosing of **IQ Veterinary One Stop** in the water ingested by these animals or parenteral administration aims at correcting dehydration, killing harmful bacteria and viruses while restoring salts lost in the bodily fluids.
- **IQ Veterinary One Stop** can be applied by fogging to the pens in order to reduce the cross contamination of harmful germs during animal rearing.

METHOD OF APPLICATION

1. Dosage: 10ml/Kg live mass.
2. This dosage can be given twice daily and may be repeated if the condition persists.
3. When used as an antimicrobial agent by fogging, a 10% dilution with clean water may be applied.

SIDE EFFECTS

None known. **IQ Veterinary One Stop** solution is completely safe and contains no harmful chemicals or alcohol in composition. Use only as instructed.
